F04

数值主动学习：样本表示与选样准则解耦

A 样本表示

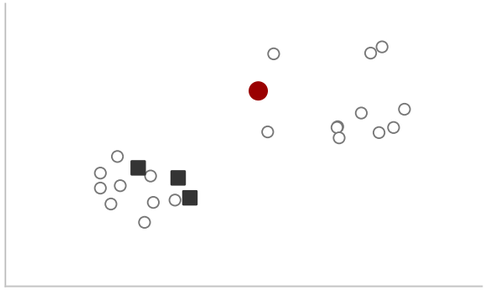

$$C = (V_1 + V_2)/2 \quad W = V_2 - V_1$$

CW特征来自模型输出对参数的梯度
再由CountSketch压缩，512D不是两个标量

B 选样准则

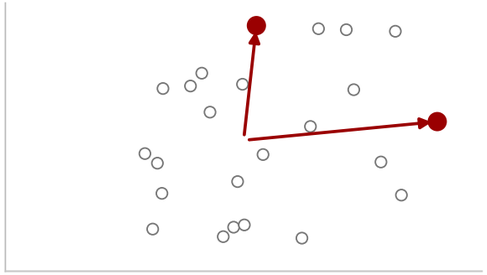

LCMD

补充覆盖不足的区域
最大簇 → 最远候选

■ 已标记 ○ 候选 ● 选中

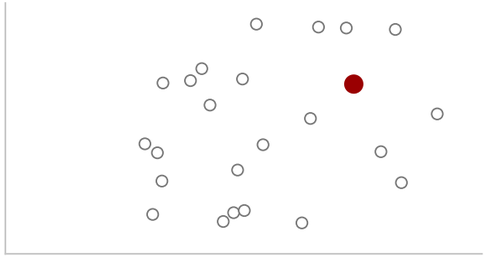

MaxDet

选择互补的信息方向

$$\max_S \log\det(A_{L\cup S}) - \log\det(A_L)$$

IVR

降低参考集的平均代理方差

$$\Delta_i = \frac{x_i^T \Sigma_L M \Sigma_L x_i}{1 + x_i^T \Sigma_L x_i}$$

$R = L_t \cup U_t$，$M = X_R^T X_R/|R|$

分子、特征槽与点集均为概念示意，不是实验结果；IVR是线性核代理方差缩减。
